LinkedIn: Veera Palla

PROFESSIONAL SUMMARY:

- Full-Stack Developer with around **4 years** of experience building scalable, high-performance applications using **React.js**, **TypeScript**, **Java 17**, **Spring Boot**, and **Microservices**, across retail, airline, and e-commerce domains with a focus on **SPA** and **event-driven** systems.
- Skilled in building modular, responsive front-ends with **React.js**, **Redux Toolkit**, **React Query**, **TypeScript**, **Tailwind CSS**, **Material UI**, and **Micro Frontends**, delivering maintainable, accessible interfaces and measurably faster page loads.
- Proficient in back-end development with **Java 17**, **Spring Boot**, **Spring MVC**, **Spring Data JPA**, and **Hibernate**, building secure **RESTful** and **GraphQL** services and fault-tolerant **microservices** with **Feign**, **Resilience4j**, and **gRPC** against **PostgreSQL**, **MySQL**, **Oracle**, and **MongoDB**.
- Hands-on cloud experience with **AWS** (EC2, EKS, ECS, Lambda, **API Gateway**, S3, RDS, SQS, SNS, IAM, **CloudWatch**) as the primary platform, integrating these services into **Spring Boot** microservices and APIs, with working exposure to **GCP** (GKE, Cloud Run, Pub/Sub, BigQuery), **Docker**, **Kubernetes**, **Helm**, and **Terraform** alongside dedicated DevOps and SRE teams.
- Skilled in **event-driven architectures** and **caching strategies** using **Apache Kafka**, **RabbitMQ**, and **Redis**, enabling asynchronous, low-latency, high-throughput communication across distributed systems.
- Strong in **CI/CD automation** and quality engineering with **Jenkins**, **GitHub Actions**, **GitLab CI/CD**, **Maven**, **Gradle**, **JUnit**, **Mockito**, and **SonarQube**, backed by **OAuth 2.0** and **JWT** security and **Agile/SCRUM** delivery.

TECHNICAL SKILLS:

Frontend	React.JS, Next.Js, Redux Toolkit, Redux-Saga, React Hooks, Context API, React Router, React Query, Axios, Formik, JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS, Tailwind CSS, Material UI, Bootstrap, SPA, Micro Frontends, Storybook.
Backend	Java (8/11/17), Spring Boot, Spring MVC, Spring Data JPA, Hibernate, JPA, Spring Security, Spring Boot Actuator, Lombok, MapStruct, REST APIs, GraphQL, gRPC, Feign, Resilience4j, Microservices.
Databases	PostgreSQL, MySQL, Oracle, SQL Server, MongoDB, DynamoDB, Elasticsearch.
Caching	Redis, HTTP caching, React Query cache, Spring Cache.
Messaging	Apache Kafka, RabbitMQ, AWS SQS, AWS SNS.
Cloud Services	AWS (EC2, EKS, ECS, Lambda, API Gateway, S3, RDS, SQS, SNS, IAM, CloudWatch, CodePipeline, Bedrock), GCP (GKE, Cloud Run, Pub/Sub, BigQuery).
APIs & Security	RESTful APIs, GraphQL, WebSockets, OAuth 2.0, JWT, SSO, Swagger/OpenAPI.
Testing	React Testing Library, Jest, Jest-DOM, user-event, Cypress, Mock Service Worker (MSW), JUnit, Mockito, REST Assured, SonarQube, Postman, Swagger.
DevOps & Build	Docker, Kubernetes, Helm, Terraform, Jenkins, GitHub Actions, GitLab CI/CD, Maven, Gradle, Nexus, Webpack, Vite, Babel, npm, Yarn.
Monitoring	Prometheus, Grafana, CloudWatch, Splunk.
Tools & IDEs	JIRA, Confluence, Git, GitHub, IntelliJ IDEA, VS Code, Eclipse, Linux, Claude code, Codex, Cursor, GitHub Co-pilot.

PROFESSIONAL EXPERIENCE:

Walmart, United States

Jul 2025 – Present

Full-Stack Developer

Responsibilities:

- Developed and maintained backend **Java 17 / Spring Boot** microservices powering the core inventory and order-fulfillment platforms, resolving API scaling issues for services handling peak traffic windows up to **3,000 requests/second**.
- Built responsive internal operational dashboards using **React**, **TypeScript**, and **Redux Toolkit**; authored and documented 15+ highly reusable UI components that standard shared libraries adopted to reduce UI duplication.
- Integrated an internal fine-tuned LLM via **AWS Bedrock** into a **Spring Boot** service, consuming the model endpoint through the **Bedrock** Runtime async client to handle long-running inference without timeouts.
- Owned the end-to-end integration workflow, parsing the model's raw text output into structured **JSON** and surfacing the results in an internal team-facing **React** interface.
- Integrated and configured **Apache Kafka** consumers for processing inventory events, implementing idempotent message handling and dead-letter queues to eliminate data inconsistencies during high-volume data streams.
- Acted as the feature lead for a sub-team of three developers during a major catalog service rewrite, ensuring timely milestone delivery and onboarding two incoming junior engineers on the local development setup and codebase architecture.

- Packaged backend services with **Docker** and deployed them onto **AWS EKS** clusters managed by the platform team, using **Helm** charts to promote builds through the development-to-production pipeline.
- Refactored read-heavy pricing queries by implementing multi-layer caching with **Redis** and **Spring Cache**, cutting down database read latency and shielding the primary **PostgreSQL** instance from redundant downstream hits.
- Owned production monitoring for the fulfillment domain during rotating weekly on-call shifts, using **AWS CloudWatch**, **Grafana**, and **Splunk** to track service health and log data and catch deployment regressions early.
- Drove unit and integration testing workflows across the repository, writing backend tests with **JUnit** and **Mockito** and frontend tests with **React Testing Library** to push code coverage to a verifiable **80%** baseline before release pipeline execution.
- Introduced feature flags and canary deployments in the CI/CD pipeline, enabling safer progressive rollouts and letting the team ship to production multiple times per week with fast rollback.

Environment: React.js, Redux Toolkit, TypeScript, Java 17, Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST, GraphQL, OAuth 2.0, JWT, Kafka, Redis, PostgreSQL, Docker, Kubernetes, Helm, AWS (EKS, API Gateway, S3, RDS, SQS, SNS, IAM, CloudWatch, Bedrock), Jenkins, GitHub Actions, JUnit, Mockito, React Testing Library, Jest, Grafana, Prometheus, Splunk, JIRA, Git.

Southwest Airlines, United States
Software Developer II

Dec 2023 – May 2025

Responsibilities:

- Assisted in the legacy migration of flight-booking and passenger-management workflows into modular **Java 17** microservices, deploying application code to cloud environments utilizing **AWS EC2** and internal infrastructure.
- Integrated **AWS API Gateway** to safely expose microservice endpoints to the customer-facing web client, enforcing authorization policies using **OAuth 2.0** protocols and JSON Web Tokens (**JWT**).
- Rewrote legacy customer booking flows in **React** and **TypeScript**, leveraging asynchronous code-splitting and component memoization to drop initial bundle load sizes and visibly improve client-side interaction speed.
- Integrated **Resilience4j** circuit breakers and **Feign** clients across internal microservices, preventing cascading timeouts during flight notification backlogs and maintaining stable core application uptime.
- Led the technical coordination between the backend engineering team and external automated testing squads, standardizing REST API documentation via **Swagger/OpenAPI** to eliminate integration bottlenecks.
- Implemented **RabbitMQ** messaging queues to process asynchronous transactional passenger notifications, effectively decoupling heavy email/SMS distribution tasks from main flight transaction threads.
- Leveraged **AWS CloudWatch** metrics and execution traces to debug and resolve distributed system latency spikes, pinpointing inefficient **Hibernate** queries and patching database interaction layers.
- Migrated portions of the passenger-management **REST** layer to **GraphQL** for the mobile client, reducing over-fetching and cutting the number of round trips on high-traffic screens.
- Monitored the health of owned services during on-call by consuming metrics from **Grafana** and **Prometheus**, using dashboards and alerts maintained by the platform team to triage flight-notification issues faster.

Environment: Java 17, Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST, React.js, Redux Toolkit, TypeScript, Feign, Resilience4j, Kafka, RabbitMQ, Redis, PostgreSQL, MongoDB, Docker, Kubernetes, AWS (EC2, EKS, Lambda, S3, CloudWatch), GCP (GKE, Pub/Sub), Jenkins, GitHub Actions, JUnit, Mockito, React Testing Library, Jest, Cypress, Grafana, Prometheus, Splunk, JIRA, Git.

Flipkart, Bangalore, India
Software Engineer

Feb 2021 – Jun 2022

Responsibilities:

- Developed interactive modular dashboard interfaces for the seller-facing management portal using **React** and **Redux**, converting layout designs into accessible and functional front-end screens.
- Built **Spring Boot** endpoints for the core order-management domain, managing database schemas and tracking persistence mapping logic with **Hibernate** against a **PostgreSQL** backend.
- Took direct ownership of the team's critical issue queue, debugging and resolving complex race conditions within the checkout transaction logic, resulting in a cleaner code base for high-traffic sales events.
- Maintained **Apache Kafka** event pipelines for asynchronous communication between order entry, catalog validations, and downstream shipping services.
- Applied front-end optimizations including dynamic lazy loading and image handling tweaks, cutting down home page asset weights by roughly **20%** to help performance over low-bandwidth client networks.
- Maintained local and staging **Jenkins** build scripts, automating test suite runs on incoming **Git** commits to ensure pipeline failures were identified immediately prior to production candidate builds.
- Partnered with UX designers to improve accessibility and responsiveness of the seller portal, aligning components with WCAG guidelines across desktop and mobile browsers.

Environment: Java, Spring Boot, Hibernate, JPA, REST, React.js, Redux, Redis, Kafka, PostgreSQL, MongoDB, Docker, AWS (EC2, S3, CloudWatch, IAM), Jenkins, JUnit, Mockito, React Testing Library, Jest, Maven, Git, JIRA, Agile/Scrum.

EDUCATION:

University of Illinois Chicago (UIC), Chicago, IL
 Master of Science in **Management Information Systems**

Aug 2022 – May 2024
